1. Find a picture of any flower in your computer or from online resource. Insert the picture into your Excel worksheet and give it a frame. Draw the picture frame on a table.

2. Sketch a picture of a computer with the computer screen showing exactly any window that is currently open on your desktop now.

3. Hanna Yeoh is the President of a secondary school science club. Michelle Ong is the secretary while Atikah is the treasurer. They have a school advisor for this club, Mr. Rajendran Rajagopal who teach Science class of form 4 students. This club has 3 committees namely Project & Event, Fund Raising and Logistic & Technical. The heads of these committees are Liyana Johnson, Jacqueline Abdullah and Kareem respectively. Prepare a suitable organization chart for this club.

4. Represent the earth water cycle process using suitable Excel SmartArt.

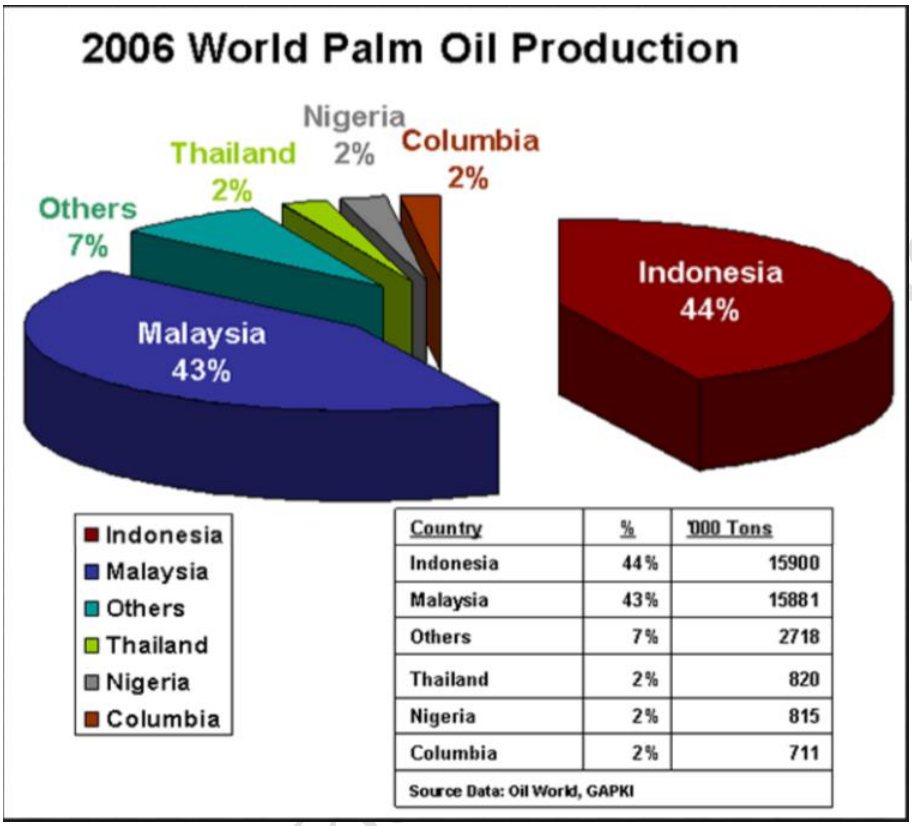

5. The employment rates of 6 countries from 1998 until 2000 are tabulated as below.

No.	Employment Rates	Year		
		1998	1999	2000
1.	Australia	75.3	75.5	76.3
2.	Austria	81	82	82.5
3.	Belgium	74.4	76.4	77.9
4.	Canada	78.3	79.2	79.9
5.	Czech Republic	83.7	81.9	81.6
6.	Denmark	83.4	84.4	84.3

Use Excel clustered column charts to represent these data graphically.

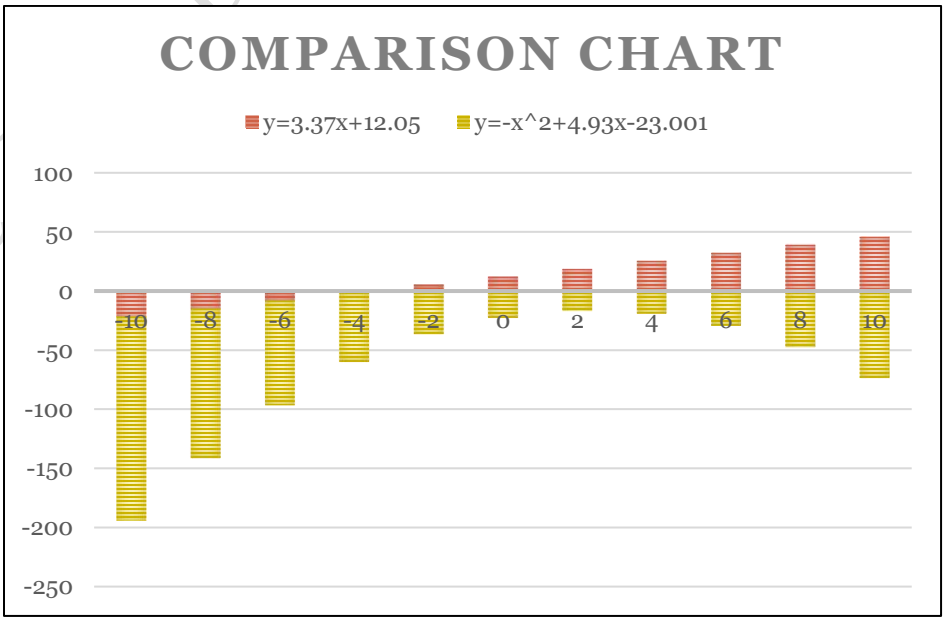

Assoc. Prof. Dr. Noor Fadiya Mohd Noor

6. Transform the following pie chart into a doughnut chart.

Country	%	'000 Tons
Indonesia	44%	15900
Malaysia	43%	15881
Others	7%	2718
Thailand	2%	820
Nigeria	2%	815
Columbia	2%	711
Source Data: Oil World, GAPKI		

7. Plot the following graph for the functions $y = 3.37x + 12.05$ and $y = -x^2 + 4.93x - 23.001$ over the domain $x = -10, -8, .., 8, 10$.

8. Use line chart with markers to plot the curves of $y = 8x - 1$ and $y = 6x^2 - x + 3$ over the domain $x = -5, 4, .., 4, 5$.

9. Plot the following data and add the respective trendline. Display the trendline equation and the R^2 value on the graph. Next plot the residual error between the actual function of y and the trendline.

x	y
0	0.40
1	0.55
2	0.60
3	0.61
4	0.65
5	0.66
6	0.70
7	0.69
8	0.72
9	0.78
10	0.80

10. Plot the following data and show the R^2 value on the graph. Find the best curve-fit function to represent the data more accurately. Next plot the absolute standardized error between the actual function and the best fitted function of y.

x	y
10	25.01
15	26.12
20	26.75
25	27.50
30	27.95
35	28.06
40	27.96
45	27.40
50	26.93
55	26.33
60	26.01
